In this appendix, we provide additional details referenced in the main paper in a series of tables below. We list the tables first along with notes. We also provide a list of group indices used when reporting information on disaggregated groups. Group indices are used to save space in tables.

Appendix Tables

- Summary Statistics for Main IRS Sample (see Table 2, main text)
 - A1. Self-employed definition based only on income criteria
 - A2. Men
 - A3. Women
 - A4. College-educated
 - A5. Not college-educated
 - A6. Self-employed by employer status
- CPS and IRS Comparisons
 - A7. Paid-Employed Sample Comparison (see Table 3, main text)
 - A8. Paid-Employed Shares (see Table 4, main text)
- Summary Statistics After Grouping Individuals (see Table 7, main text)
 - A9. Men
 - A10. Women
 - A11. College-educated
 - A12. Not college-educated
 - A13. Ever employer
 - A14. Never employer
- Age-over-Age Growth in Incomes (see Figure 4, main text)
 - A15. Residual income changes, tried self-employment
 - A16. Residual income changes, primarily paid-employed
- Exit Rates, Overall and To PE, NE (noted in main text)
 - A17. Exit rates by year
 - A18. Exit rates by year, employers
 - A19. Exit rates by age
 - A20. Exit rates by age, employers
- Entry Rates, Overall and From PE, NE (see Figure 6, main text)
 - A21. Entry rates by year
 - A22. Entry rates by year, employers
 - A23. Entry rates by age
 - A24. Entry rates by age, employers

- Statistics for 141 disaggregated groups

A25. Estimated Income Profiles (see Figure 2, main text)

A26. Age-over-age growth, 10th percentile (see Figure 4, main text)

A27. Age-over-age growth, 50th percentile (see Figure 4, main text)

A28. Age-over-age growth, 90th percentile (see Figure 4, main text)

A29. Rank Autocorrelations (noted in main text)

Table Notes

- Tables A1–A6. These summary statistics are computed using individual-year observations in the IRS sample (C) in Table 1 of the main text. For Table A1, the criteria for self-employed are as in (2) of Table 1. For Tables A2–A6, the criteria for self-employed are as in (3) of Table 1. See Section 2 of the main text for more details on the sample construction and income measures. Incomes and gross profits are reported in thousands of 2012 dollars. To ensure that no confidential information is disclosed, reported percentiles here and elsewhere are computed as an average of observations around the value listed in the table. Industries are classified by 2-digit NAICS.
- Table A7. Summary statistics are reported for two CPS samples that differ in the criteria used to assign individuals in a particular year as “self-employed.” CPS sample (1) uses business income reported in the survey as self-employment income, and categorizes an individual as self-employed if the absolute value of that self-employment income is greater than \$5,000 (in 2012 dollars) and greater than income from paid-employment. The same criteria for defining the self-employed is used for CPS sample (2), but *after* reclassifying wage and salary income of incorporated business owners as income from self-employment and adding that to the business income reported in the survey. The criteria used to assign individual-year observations in the IRS self-employed sample (1) are the same as for the CPS sample (1). Sample criteria for IRS samples (2) and (3) are the same as in Table 1 of the main text. To ensure that no confidential information is disclosed, reported IRS percentiles are computed as an average of observations around the value listed in the table.
- Table A8. See Table A7 for details on the criteria used to define the self-employed in the CPS and IRS samples. The table reports shares of the paid-employed—in individual counts and total incomes—after ranking individuals by their total incomes. Income bins are defined using percentiles of income for the self-employed in CPS sample (1).
- Tables A9–A14. These summary statistics are computed using panel data for individuals in IRS sample (C) in Table 1 of the main text, with the criteria for self-employed in (3). See Section 2 of the main text for more details on the sample construction and income measures. For more details on the time-invariant groups listed as the top of each column, see Section 4.2 of the main text. Incomes and gross profits are reported in thousands of 2012 dollars. To ensure that no confidential information is disclosed, reported percentiles are computed as an average of observations around the value listed in the table. Industries are classified by 2-digit NAICS.
- Tables A15–A16. The table shows selected percentiles of the distribution of the age-over-age change in residual income (after subtracting the age and time effects we estimated in Section

4 of the main text) normalized by previous year income: $\Delta\epsilon_{ia}/|y_{i,a-1}|$ for individual i at age a . See details of the group assignment in Section 4.2. To ensure that no confidential information is disclosed, reported percentiles are computed as an average of observations around the value listed in the table. Industries are classified by 2-digit NAICS.

- Tables A17–A20. The sample underlying these tables includes all individuals in the “Total Sample” column of Table 2 of the main text. Exit rates from self-employment are reported by year and by age, for all self-employed and separately for those switching to paid- and to non-employment. Age and time effects are extracted using the procedure outlined in Section 4.1 of the main text.
- Tables A21–A24. The sample underlying these tables includes all individuals in the “Total Sample” column of Table 2 of the main text. Entry rates into self-employment are reported by year and by age, for all non-self-employed and separately for those switching from paid- and from non-employment. Age and time effects are extracted using the procedure outlined in Section 4.1 of the main text.
- Table A25. The table reports integrated income $Y_G(a)$ at each age a for disaggregated groups listed below. See details of the estimation procedure and the group assignment in Section 4 of the main text.
- Tables A26–A30. The tables report selected percentiles and rank autocorrelations of the distribution of age-over-age income changes by age, namely, $\Delta y_{ia}/|y_{i,a-1}|$ for individual i at age a for disaggregated groups listed below. See details of group assignment in Section 4 of the main text. Values are replaced by a * to ensure that no individual taxpayer data is disclosed. In addition, reported percentiles are computed as an average of observations around the value listed in the table.

Disaggregated Group Numbers

1. Tried self-employment (TSE), total
2. TSE men
3. TSE women
4. TSE married
5. TSE not married
6. TSE college-educated
7. TSE not college-educated
8. TSE cognitively-skilled
9. TSE not cognitively-skilled
10. TSE interpersonally-skilled
11. TSE not interpersonally-skilled
12. TSE manually-skilled
13. TSE not manually-skilled
14. TSE agriculture
15. TSE construction
16. TSE manufacturing
17. TSE wholesale trade
18. TSE retail trade
19. TSE transportation
20. TSE information
21. TSE finance
22. TSE real estate
23. TSE professional services
24. TSE administration
25. TSE health care
26. TSE arts
27. TSE accomodation
28. TSE other services
29. Primarily self-employed (PSE), total
30. PSE men
31. PSE women
32. PSE married
33. PSE not married
34. PSE college-educated
35. PSE not college-educated

36. PSE cognitively-skilled
37. PSE not cognitively-skilled
38. PSE interpersonally-skilled
39. PSE not interpersonally-skilled
40. PSE manually-skilled
41. PSE not manually-skilled
42. PSE agriculture
43. PSE construction
44. PSE manufacturing
45. PSE wholesale trade
